

mark_me

Product Documentation

[Feature Specification](#) | [Pricing Matrix](#) | [Tech Stack](#)

Version 1.0 — March 2026

Confidential

1. Test Accounts

The following mock accounts are pre-configured in the application for testing purposes. On the login page, click any account card to auto-fill the credentials.

Name	Email	Password	Plan	Role
Ajibola Genius	demo@markme.io	mark_me1	PRO	Primary tester
Free Tester	free@markme.io	test123	FREE	Limit testing

How to test:

1. Navigate to the Login page (click "Log in" on the landing page)
2. The demo account (demo@markme.io) is pre-filled automatically
3. Click a different account card to switch credentials
4. Click "Sign In" — you'll be logged in with that account's plan and profile
5. Any other email/password (6+ chars) creates a new Free account on the fly

2. Pricing Tier Feature Matrix

Features are grouped into five functional categories. Each tier inherits all features from the tier below it.

2.1 Core Bookmark Management

Feature	Free	Pro	Team
Create / edit / delete categories	✓	✓	✓
Add / edit / delete bookmarks with notes	✓	✓	✓
Tag system (category + bookmark level)	✓	✓	✓
Pin bookmarks to top of category	✓	✓	✓
Masonry bento grid layout	✓	✓	✓
Search with debounced filtering	✓	✓	✓
Sort controls (A-Z, count, newest)	✓	✓	✓
Tag filter bar	✓	✓	✓
Favicon auto-fetch with fallback	✓	✓	✓
Export / Import JSON backup	✓	✓	✓
Category limit	5	Unlimited	Unlimited
Bookmark limit	100	Unlimited	Unlimited

2.2 UI / UX Polish

Feature	Free	Pro	Team
Page transition crossfades	✓	✓	✓
Spring card entrance animations	✓	✓	✓
Smooth expand / collapse accordion	✓	✓	✓
Animated stat counters	✓	✓	✓
Delete confirmation + undo toast (5s)	✓	✓	✓
Bottom sheet modals on mobile	✓	✓	✓
Swipe-to-delete on bookmarks	✓	✓	✓

Pull-to-refresh on dashboard	✓	✓	✓
Mobile FAB (floating action button)	✓	✓	✓
Link preview tooltip on hover	—	✓	✓
Relative timestamps on bookmarks	—	✓	✓
Bookmark count + pinned count badges	—	✓	✓

2.3 Accessibility & Performance

Feature	Free	Pro	Team
Full keyboard navigation (Tab/Enter/Esc)	✓	✓	✓
Focus trap in modals + overlays	✓	✓	✓
ARIA labels on all interactive elements	✓	✓	✓
Skip-to-content link	✓	✓	✓
Focus-visible ring styling	✓	✓	✓
Error boundaries (per page + grid)	✓	✓	✓
Virtualized masonry grid	—	✓	✓
Debounced search (150ms)	—	✓	✓
React.memo on CatCard	—	✓	✓
Search match highlighting	—	✓	✓

2.4 Chrome Extension & Sync

Feature	Free	Pro	Team
Chrome extension (save bookmarks)	—	✓	✓
New Tab override (clock + shortcuts)	—	✓	✓
New Tab search across all bookmarks	—	✓	✓
Pinned shortcuts on New Tab	—	✓	✓
Recently added grid on New Tab	—	✓	✓
Firebase cloud sync & backup	—	✓	✓
Cross-device sync (real-time)	—	✓	✓
Auto-import from browser bookmarks	—	—	✓

2.5 AI & Advanced Features

Feature	Free	Pro	Team
AI assistant panel (Claude-powered)	—	✓	✓
AI auto-tagging suggestions	—	✓	✓
AI category summarization	—	✓	✓
AI duplicate detection	—	✓	✓
AI reorganization suggestions	—	✓	✓
AI queries per day	—	50	Unlimited
Bio website generator (link-in-bio)	—	—	✓
Shared team workspaces	—	—	✓
Admin dashboard & roles	—	—	✓
REST API access	—	—	✓
Priority support	—	✓	✓
Dedicated support channel	—	—	✓

2.6 Pricing Summary

	Free	Pro	Team
Monthly price	\$0 / forever	\$5 / month	\$12 / user / month
Annual price	\$0 / forever	\$4 / month	\$9 / user / month
Annual savings	—	20% (\$12/yr)	25% (\$36/yr)
Free trial	N/A	14 days	14 days

3. Recommended Tech Stack

The following technology choices are recommended for building mark_me as a production-grade, scalable SaaS product across web, extension, and mobile.

3.1 Frontend (Web App)

Layer	Technology	Rationale
Framework	Next.js 15 (App Router)	SSR/SSG, file-based routing, server actions, edge middleware, built-in image optimization
Language	TypeScript 5.x	Type safety across the full stack, better DX, IDE autocompletion, refactoring confidence
UI Library	React 19	Concurrent rendering, server components, Suspense for data fetching, hooks-first architecture
Styling	Tailwind CSS 4 + CSS Variables	Utility-first, matches the design token system, JIT compilation, no runtime overhead
Animation	Framer Motion 11	Declarative spring animations, layout animations, gesture support (replaces custom hooks)
State Management	Zustand + React Query	Zustand for client state (UI, auth), React Query for server state (bookmarks, categories)
Forms	React Hook Form + Zod	Performant form handling with schema-based validation, zero re-renders
Icons	Lucide React	Tree-shakeable, consistent stroke-width, matches the design system's icon style
Rich Text	Tiptap (for notes)	ProseMirror-based, extensible, markdown shortcuts for bookmark notes

3.2 Backend & API

Layer	Technology	Rationale
Runtime	Node.js 22 (LTS)	JavaScript everywhere, excellent async I/O, largest package ecosystem
API Framework	Next.js API Routes / tRPC	Co-located with frontend, end-to-end type safety with tRPC, auto-generated client
Authentication	NextAuth.js v5 (Auth.js)	Google/GitHub OAuth, email magic links, session management, JWT + database sessions

Database	PostgreSQL 16 (via Supabase)	Relational integrity for bookmark/category/tag relationships, full-text search, row-level security
ORM	Drizzle ORM	Type-safe SQL queries, zero overhead, migrations, edge runtime compatible
Caching	Redis (Upstash)	Session cache, rate limiting, AI response cache, real-time pub/sub for sync
File Storage	Supabase Storage / S3	User avatars, bookmark screenshots, export files, CDN delivery
Search	PostgreSQL FTS + pg_trgm	Full-text search with trigram fuzzy matching, no external service needed initially

3.3 AI Integration

Layer	Technology	Rationale
LLM Provider	Anthropic Claude API	Best-in-class reasoning for categorization, Sonnet 4 for speed, Opus 4 for complex analysis
SDK	Anthropic TypeScript SDK	Official SDK, streaming support, tool use for structured output (tag arrays, categories)
Prompt Pipeline	Server-side w/ context injection	Inject user's full bookmark graph as structured context, cache system prompts per user
Auto-tagging	Claude + Tool Use	Structured output via tool_use to return JSON tag arrays, validated with Zod
Rate Limiting	Upstash Redis	Per-user daily limits (50 Free, unlimited Pro), token bucket algorithm
Embeddings (future)	Voyage AI / Cohere	Semantic similarity for duplicate detection, related bookmark suggestions

3.4 Chrome Extension

Layer	Technology	Rationale
Manifest	Chrome MV3	Required for Chrome Web Store, service workers, declarativeNetRequest
UI Framework	React 19 + Vite	Shared components with web app, fast HMR during development
Popup	React (280px width)	Quick-save current tab, one-click tag + categorize
New Tab Override	React full-page	Clock, search, pinned shortcuts, recent bookmarks — shared component library

Background	Service Worker (MV3)	Bookmark listener, context menu integration, sync orchestrator
Storage	chrome.storage.sync	Cross-device extension settings, last sync timestamp, offline queue
Auth	OAuth2 token exchange	Share session with web app via secure token handoff
Build	CRXJS Vite Plugin	Hot reload in dev, auto-manifest generation, output for Chrome Web Store

3.5 Mobile App (Future)

Layer	Technology	Rationale
Framework	React Native 0.76+ (New Arch)	Shared business logic with web, Fabric renderer, TurboModules for native perf
Navigation	Expo Router v4	File-based routing (matches Next.js mental model), deep linking, universal links
UI Kit	Tamagui / NativeWind	Tailwind-compatible styling on native, shared design tokens with web
Storage	MMKV (via react-native-mmkv)	10x faster than AsyncStorage, synchronous reads, encrypted storage for tokens
Sharing	Share Extension (iOS/Android)	Save bookmarks from any app's share sheet into mark_me
Push	Expo Notifications + FCM	Sync status alerts, shared bookmark notifications for teams

3.6 Infrastructure & DevOps

Layer	Technology	Rationale
Hosting	Vercel (Web + API)	Zero-config Next.js deployment, edge functions, preview deploys per PR, analytics
Database Host	Supabase (PostgreSQL)	Managed Postgres, built-in auth (backup), real-time subscriptions, row-level security
CDN	Vercel Edge Network	Global edge caching, automatic image optimization, <50ms TTFB worldwide
CI/CD	GitHub Actions	PR checks (lint, type-check, test), preview deploys, automated releases
Monitoring	Sentry + Vercel Analytics	Error tracking with source maps, Web Vitals, custom event tracking

Payments	Stripe	Subscription management, usage-based billing, customer portal, webhook events
Email	Resend	Transactional emails (welcome, password reset, export ready), React Email templates
Domain	Cloudflare (DNS + WAF)	DNS management, DDoS protection, SSL, edge rules
Testing	Vitest + Playwright	Unit tests (Vitest, 10x faster than Jest), E2E tests (Playwright, cross-browser)
Linting	Biome	All-in-one linter + formatter, 100x faster than ESLint + Prettier

3.7 Architecture Diagram (High-Level)

User → Vercel Edge (Next.js SSR) → tRPC API Routes → Supabase (PostgreSQL + Auth + Storage)

Chrome Extension → OAuth token exchange → Same API Routes → Same Database

AI Panel → Server Route → Anthropic Claude API → Structured response → Client

Mobile App → Expo + React Native → Same tRPC API → Same Database

All clients share the same API layer, database, and authentication system. The frontend component library (React) is shared between web, extension new tab, and mobile via a monorepo structure.

3.8 Monorepo Structure

Recommended: Turborepo + pnpm workspaces

apps/web — Next.js web application

apps/extension — Chrome MV3 extension (Vite + CRXJS)

apps/mobile — React Native app (Expo)

packages/ui — Shared React components (design system)

packages/db — Drizzle schema, migrations, queries

packages/api — tRPC router definitions

packages/ai — Anthropic integration, prompt templates

packages/config — Shared ESLint, TypeScript, Tailwind configs
